Cell line WI-26 VA4. The mature full-length TNFRI is a glycoprotein thating a mol. wt. of about 75-80 kDa. The clohing of the CDNA for Taving a mol. wt. of about 75-80 kDa. The clohing of the CDNA for TNFRI was described in Smith et al., Science 248:1019,1990. Clone I is contained in expression vector pcav/NOT-TNFR (ATCC.68088). A crecombinant chimneric antibody may be produced having TNFR sequences substituted for the variable domains of either or both of the immunoglobulin molecule heavy and light chains and having TNFR sequences cummodified constant region domains. A specific example of a TNFR/FC fusion protein is given in Q45225/R51003. The rhu TNFR:FC fusion gene was created by ligating the following fragments into a cloning vector: J an 867 bp Asp118-Pvu2 fragment from pCNV/NOT-TNFR (ATCC 68088) contg. the cDNA encoding the truncated TNFR. 2) a 700 bp Styl-Spel fragment from plasmid pIXX498 coding for 232 AAs of the cottor contg. the FC fragment of human IgGl. Plasmid pIXX498 is a yeast expression vector contg. the FC fragment of human IgGl. Plasmid piXX498 is a peast expression the truncated TNFR with the human IgGl. 3) An oligo linker, to linker was created by PCR using primer Q45226, which encodes the 3' can of the truncated TNFR with the human IgGl. 3) An oligo linker, cond of the truncated TNFR with the human IgGl. 9) An oligo linker, cond of the truncated TNFR with freepfor and the 5' end of human IgGl. 257-237 of human IgGl.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -----ESTQKVDKTHTCPPCPAPELLG 190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      74 yydq--taqmccskcspgqhakvfctktsdtvcdscedstytqlwnwvpeclscgsrcsc 131

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            region. The invention provides the use of Fas antagonist as an agent for the treatment and prevention of apoptosis-related diseases. The Fas antagonist can be a partial Fas antigen peptide containing the extracellular part of the protein, but lacking the signal sequence, an anti-Fas antibody, or an anti-Fas ligand antibody, where the antibody is preferably a humanised antibody. The Fas antagonist is used in the treatment and prevention of diseases such as myocardial infarction, heart failure, ischemic restencies of the heart, liver or kidney, and endotoxic shock, and also as an organ preservative in transplantation. The agent is of low toxicity but effectively inhibits the Fas/Fas ligand
Fas ligand; Fas antagonist; apoptosis related disease; liver disease;

         promotes apoptosis and is useful in treatment
                                                         The present sequence is a Fas antigen derivative/IgG1 Fc fusion, which contains a Fas antigen extracellular region lacking one or more amino acid residues in the region from the amino-terminal to (but excluding) the 1st cysteine residue (preferably at least 29 residues are deleted). The derivative is an effective regulator of apoptosis and can be used (either by administration of the polypeptide, or by the use of the coding DNA in gene therapy) to treat a range of diseases, ey, diabetes, arthritis, lupus and in particular viral diseases such as hepatitis, influenza and HIV, by modulating apoptosis of virus-infected cells.
                                                                                                                                                                                                                                                                                                                                                                                               VCKRCPDGFFSNETSSKAPCRKHTNCSVFGLLLTQKGNATHDNICSGNSESTQKVDKTHT

                                                                                                                                                                                                                                                                                                                                                                                                                    This plasmid encodes an OX40/Fc antibody fragment mutein protein, and is used to express a soluble OX40/Fc mutein fusion protein for use in detecting cDNA clones encoding a OX40 ligand. The Fc fragment may be derived from human 19G1, and the plasmid may be used to transform the CV-1/EBNA (ATCC CRL 10478) monkey kidney cell line. Culture supernatant was purified by affinity chromatography and this was used, together with labeled goat anti-human 19G to screen various cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ptqdtvcrcr-----pgtqprqdsgyklgvdcvpcppghfs--pgnnq

                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents the OX40/Fc fusion protein that contains the extracellular domain of mouse OX40 fused to the mutated Fc region of the human IgG1 antibody. The fusion protein was used for detecting cDNA clones encoding an OX40 ligand. The invention claims for a murine OX40-L cytokine (W48975) that binds to the murine T cell antigen, OX40. The OX40-L protein is claimed to be useful for co-stimulation of T-cell production and in binding assays for detecting OX40 or its homologues. The OX40-L protein is also claimed to generate a TH-2 immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ------QKVDKTHTCPPCPAPELLGGPSVFLFPPKPKDTLMISRTPEVTCVVVDV 220

in the control of endothelial cell biology. The murine polynocleotide was identified from a white adipose tissue cDNA library. The polypeptide is useful for identifying receptors, which bind to and/or are activated by the polypeptide. The polynocleotide is useful in gene therapy of cerebral autosomal dominant ateriopathy with subcortial infarcts and leucoencephalopathy, an autosomal dominant disorder causing ischemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cell development cycle protein of delta family useful for treating various disorders associated with central nervous system e.g. cerebral autosomal dominant ateriopathy and ischemic strokes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a fusion protien of the extracellular domain of a murine polypeptide, which a member of the cell development cycle protein family known as the Delta family of mammalian membrane surface-bound ligands, and the human immunoghobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            G (IgG) Fc portion. The murine delta-related protein gene is expressed within vascular endothelium indicates a role for the polypeptides

This represents an integrin beta-1 chain. The invention provides integrin-immunoglobulin chimmeric protein heterodimer complexes that comprises an integrin alpha or beta chain associated with an integrin alpha compared in particular with a chimeric proteins form heterodimer complexes, in particular with a chimeric protein containing an integrin beta chain and an immunoglobulin chain and an immunoglobulin chain, the integrin beta chain and an immunoglobulin chain; the immunoglobulin chain. The integrin alpha chain is preferably alpha 4 two may be a light chain. The integrin alpha chain is preferably alpha 4 transformed with vectors containing the DNA coding for the above chimeric proteins can be used in the preparation of the chimeric proteins and their heterodimer complexes. The heterodimer complexes, which are useful for testing potential promoters and inhibitors of the binding of (integrins to their ligands, function as blood platelet substitutes and hemostatics and as diagnostic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ecstdevnsedmdaycrkensseicsnngecvcgqcvcrkrdntneiysgkfcecdnfnc 560
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      231

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence is a fusion protein of the rabbit transforming growth factor-beta receptor II (TGF-betaRII) and an antibody Fc region. The encoded protein is an example of a protein of the invention, which are isolated TGF-beta receptor tusion proteins that competitively inhibit binding of TGF-beta receptor. The fusion protein can be used in a method for lowering the levels of TGF-beta in an individual having a trihitis. It can also be used to treat medical conditions such as fibroproliferative disorders. The fibroproliferative disorder is a kidney, intraocular or pulmonary fibrosis, especially selected from vitreoretinopathy, of momentonephritis, proliferative vitreoretinopathy, or myelofibrosis. The fusion proteins can also be used to treat collagen vascular disorders, including systemic sclerosis, collagen vascular disorders, including systemic lupus erythematosus. They can also be administered following coronary angioplasty, to prevent restenosis or scarring and reclosing of arteries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            10;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          growth factor-beta (TGF-beta) type II receptor fused to the FC portion of human IgG1. The fusion protein has higher affinity for TGF-beta than fusion proteins comprising the non-variant form of the receptor. The fusion protein contains soluble TGF-beta receptor constructs that are devoid of a transmembrane region (and are secreted from the cell) but retain the ability to bind TGF-beta. The protein competitively inhibits binding of TGF-beta to cellular receptors and/or forms an inactive complex with TGF-beta. The protein is used to reduce levels of TGF-beta, for Ireatment of arthritic conditions associated with overexpression
                                                                                                                                              Amino acid sequence of TGF-beta type II receptor variant/IgG1 fusion.

10;
glomerulonephritis; proliferative vitreoretinopathy; myelofibrosis; collagen vascular disease, e.g. systemic sclerosis, polymyositis, scleroderma, dermatomyositis or systemic lupus erythematosus; and fibrosis associated with restenosis. It is also used for treating wounds, to prevent overproduction of connective tissus and so prevent adhesions or scarring, and to prevent post-radiation fibrosis (by administration to patients about to undergo radiation therapy).
                                                                                                                                                                                                                                                                                                                                                                                       236

The property of the property of the property of the present invention. NTRR-alpha proteins can be used: (a) to identify present invention. NTRR-alpha proteins can be used: (a) to identify and concleutes that bind specifically to it (potential agonists and antagonists) and to purify such compounds; (b) to modulate response of cells to neurturin (NTN); (c) to increase survival of Ret-expressing cells or to activate Ret on the surface of cells (soluble glial derived neurotrophic factor receptor (GDRR alpha) may be used the same way); (d) to increase the half-life of cognate ligands (especially NTN); (e) diagnostically to determine serum levels of its ligands; and (f) as an inmal feed additive or molecular weight marker. NTNR-alpha, its genes, corrections related to abnormal NTN activity or response, particularly neurological (central or enteric), renal or hematopoietic (spleen) diseases or injuries. Ab may be agonists or antagonists for therapeutic use (e.g. as antagonists to treat excessive/unwanted NTNR-alpha expression, e.g. in some tumours), also reagents for immunoassay and affinity purification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    225
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        345

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a neurturin receptor alpha (NTNR alpha). NTNR alpha binds neurturin. The NTNR alpha nucleic acid molecule is useful for the expression of NTNR alpha, which may be used to identify agonist and antagonist compounds having therapeutic applications, such as enhancing splenic haematopolesis, treating anaemia, thrombocytopaenia, hypoplasia, or haemorrhage. The present sequence is a NTNR alpha and IgG (immunoglobulin G) fusion protein from the
                                                                                                                                                                                                                                                                                                                                                                                         Isolated nucleic acid molecule encodes a neurturin receptor-alpha amino acid sequence excluding the N-terminal signal peptide - .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       488

Oxidized LDL is a denatured form of LDL occurring in patients having arteriosclerosis or hyperlipidaemia, and the fusion peptide can be used for the assay of oxidized LDL in biological samples from such patients, for the diagnosis of the disorders. It can also be used therapeutically for the prevention and treatment of arteriosclerosis and hyperlipidaemia. The present sequence represents a chimeric protein comprising the bovine LOX-1 extracellular region and the human immunoglobulin IgGl Fc region.
                                                                  Bovine LOX-1 extracellular region/human IgG1 Fc region chimeric protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SCPPGFGVV-----QAGTP-----ERNTVCKRCPDGFFSNETSSKAPCRKHT- 143

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NTUR alpha)/Fc sequence (IFE2a) fusion protein, from an example of the present invention. NTUR-alpha proteins can be used: (a) to identify molecules that bind specifically to it (potential agonists and analogonists) and to purify such compounds: (b) to modulate response of cells to neurturin (NTN); (c) to increase survival of Ret-expressing cells or to activate Ret on the surface of cells (soluble glial derived neurotrophic factor receptor (GDNFR alpha) may be used the same way); (d) to increase the half-life of cognate ligands (especially NTN); (e) diagnostically to determine serum levels of its ligands; and (f) as animal feed additive or molecular weight marker. NTNR-alpha, its genes, (ant)agonists and antisense nucleic acids, are useful in vivo or ex vivo for treating conditions related to abnormal NTN activity or response, particularly neurological (central or enteric), renal or haematopoietic

PT Isolated nucleic acid molecule encodes a neurturin receptor-alpha amino XX Sclaim 3; Column 97-102; 78pp; English.

CC The present invention describes a neurturin receptor alpha (NTNR alpha).

CC WINR alpha binds neurturin. The NTNR alpha, which may be used to identify agonist and antagonist compounds having therapeutic applications, such as enhancing splenic haematopolesis, treating anaemia, cc thrombocytopaenia, hypoplasia, or haemorrhage. The present sequence is a NTNR alpha and IgG (immunoglobulin G) fusion protein from the present invention.

XX Sequence 664 AA;

C; Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kag hain disulfide bonds: In some cases, such as IgA and IgM, the subunits associate into la C; Superfamily: immunoglobulin C region; immunoglobulin homology

C; Reywords: duplication; 91; coprotein; heterotetramer; immunoglobulin

F; 20-85/Domain: immunoglobulin homology < IM2>

A;Teference number: A90442; MUD:81021548
A;Contents: heavy chain disease protein Wis
A;Contents: heavy chain disease protein Wis
A;Accession: A90442
A;Molecule type: protein
A;Residues: 1-289 cFRA>
A;Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interchain
A;Note: the sequence of residues 42-76 was taken from the reference that follows
